

ABSTRACT

5 Pharmaceutical compositions are described, containing an alkylammonium salt of
a 2-arylpropionic acid, which are suitable for parenteral administration and do not
generate pain upon injection.

The compositions contain preferably ketoprofen, ibuprofen, naproxen or
tiaprofenic acid in aqueous solution at pH in the range between 8 and 9.

10 The alkylammonium salt is preferably a L-lysine salt.

Compositions at pH=8,5 have shown to cause less pain upon injection than other
known compositions.
